\$801 - \$900		\$75
\$901 - \$1000		\$80

\$1001 and over, \$7 extra for every \$200 or part thereof in excess of \$1000

IMPORTANT

INSPECTION AND TESTING REQUIREMENTS

DRAINAGE WORK: Drainlayers are required to notify the Plumbing and Drainage Inspector when all work is completed. This includes **effluent disposal** systems for septic tanks. All drains will be tested with a 1.5 m head of **water**. To implement this test it will be necessary for persons undertaking drainage work to **have sufficient** drain plugs to fill all sections of the drain prior to the Plumbing and Drainage Inspector arriving on the job, also to have available a stand pipe to apply the 1.5 m head pressure.

This form of testing is essential to exclude the possibility of ground water infiltration with its attendant increase in pumping charges and overloading of the sewers and treatment plant.

PLUMBING WORK: Plumbers are required to notify the Plumbing and Drainage Inspector when work is ready for inspection as follows:

- (a) When the building has been initially piped out and wastes are installed (before wall linings are fixed and floors laid).
- (b) When work is complete.

Plans of Drainage and Plumbing Work

In the case of single houses a preliminary drainage plan will not be required. In all other cases, however, plans of the preliminary proposal are to be submitted at the time of application for a permit. In all instances, however, an "as laid" plan must be available on site as a prerequisite to a test of the work.

In commercial buildings full plans and elevations of plumbing stacks must be provided at the time of application for a permit.

Plans **MUST** show dimensions and distances from section boundaries in metric units
